

StyleMe: Your Wardrobe, Reimagined

10/28/2025

StyleMe: Angel Chen, Chufei Peng, Grace Chen, Siyao Zhu

TF: Weiyue Li

The problem

People struggle to create cohesive outfits from their closets because styling requires time, fashion knowledge, and visual coordination.

Our solution

An AI-powered personal stylist that helps users generate complete outfit combinations directly from their own wardrobe photos, personalized by occasion, color, or style.

How it works

AI Understanding

Our model analyzes each item's style, texture, and compatibility using a visual-language matching model trained on real-world fashion data.

Upload Your Wardrobe

Users can take or upload photos of their clothes, shoes, and accessories directly from their closet.

Personalized Outfit Suggestions

Users pick one piece they want to wear, and the system builds a matching outfit around it — tailored to their vibe or occasion.

Our audience

Reference: WGR Database and Analyst Review

Everyday Users

Personalized outfit suggestions from existing wardrobe

- Saves time choosing daily outfits
- Refreshes old pieces with new styling ideas

Fashion Enthusiasts & Creators

AI-assisted style curation and trend-based matching

- Generates inspiration boards and cohesive looks
- Enables creative experimentation with color and texture

Retail & E-commerce Partners

Compatibility-based product recommendation engine

- Increases engagement and cross-selling opportunities
- Enhances personalization in online shopping experiences

Competitive Landscape

Product features

Stitch Fix

Subscription-based personal styling service combining AI and human curation

Strengths

Trusted human stylist touch adds credibility and emotional appeal

Weaknesses

Limited to its own inventory — **doesn't work with clothes users already own**

Alta

AI-powered fashion assistant to digitize your wardrobe and generate outfit suggestions from your owned items

Works with your existing clothes and allows users to set occasions and style goals

May not support any image of an **unbranded piece** as fluently

Our mission

To build complete looks from your wardrobe using AI that understands real-world fashion — no brands or shopping required, just your style.

Technical Scalability

Containerized architecture enables horizontal scaling

- Each pipeline component is encapsulated in its own Docker container
- Allow independent scaling of high-load components without over-provisioning the entire system.

Stateless pipeline design

- Each stage can be parallelized — handling multiple users uploading and querying simultaneously.
- Batch-based training and streaming inference

Cloud-based GPU infrastructure

- Deployed on Google Cloud Platform with scalable VM instances [e.g., NVIDIA V100].
- Future plan: move model serving to serverless endpoints or managed ML endpoints to scale with demand.

Model Training Optimization

Infrastructure Considerations

Future Development & Potential

Auto-scaling inference endpoints

Deploy trained models on managed Vertex AI or serverless cloud functions to scale elastically with user traffic.

Real-Time Personalization Layer

User preference learning module:

dynamically re-weights similarity scores based on past selections and feedback (e.g., “likes,” “swap this item,” “fave looks”).

Global expansion

Architecture supports multi-region deployment (e.g., US, EU, Asia) to reduce latency and serve diverse user bases.

Market Growth Potential

Our platform can scale beyond individual users through partnerships, integrations, and community engagement — turning AI-powered styling into a global, sustainable fashion ecosystem.

Where will we expand our product?

- Retail & e-commerce partners
- Closet-management integrations
- Fashion resale platforms

Who will help drive growth?

- Fashion influencers & stylists
- Apparel brand partners
- Retail tech collaborators

How will we scale?

- Premium subscriptions
- Brand collaborations
- Social media engagement

**Thank
You!**
